### **Challenges Faced**

#### **Xcode/Swift**

This project was the first time that either of us had used Xcode and Swift. Therefore, there was a learning curve in order to understand its fundamentals and the differences in language features from what we are both used to. This then made us take a bit of time to understand the language more and see how the different features such as storyboarding are linked together to generate an application. Having the previous groups application helped in this instant as we were able to see how the implementation of the application linked together.

#### **Transport API**

Through looking through the code that was implemented by the previous years group, we noticed that their main source of data that feeds into their features is done via the Transport API. As the application was originally broken due to the API, this was a challenge for us to understand exactly what the API is doing and how to perform this fix.
