### New Features

Following the app personalisation research that we found regarding what the current travel apps are doing and how other apps in different spaces are incorporating personalisation, we have outlined the features that we plan to implement into BuzApp.

- Add a favourites tab that allows the user to add the stops that they use on a regular basis
- Add a recent tab which show the last few stops that the user has searched for and used
- Add a journey planner and be able to send notifications to them for when they should leave
- Link the calendar on the iPhone to the app to identify the actions that are in the calendar to let the user know what bus they should be aiming to get to ensure that they can reach their destination on time
