Non-Functional Requirements

Efficiency

- The application needs to be able to run as efficient as possible to allow the users access to the key information quickly

Response Time

- As the information presented is based around buses and bus stops, the information needs to be fast to allow the user to be up to date with the buses.

Correctness

- It is vital that our application provides the correct data. This is because its predicated on the information of buses and bus stops which could impact a user's journey, so needs to contain the most accurate and up to date information.

Usability

- The app must build on the simplistic user interface that was previously implemented. This is to allow the user to not be confused as they navigate through the application.
